PussyCat Executive Summary

Abstract

PussyCat (PUSS) provides the framework needed to empower women in cryptocurrency without a reliance on chauvinistic men (a single point of failure), including dic*s, as*holes, bas*ards, pussy haters, and anyone who would otherwise decelerate its utility. To accomplish this, PussyCat leverages the crypto-economic primitives of Binance Smart Chain (BSC), an environmentally friendly and sustainable Proof of Staked Authority (or PoSA) consensus blockchain where participants stake BNB to validate blocks and secure the network.

Token Details:

Token name: PussyCat

Symbol: **PUSS**

Decimals: 8

Token Type: BEP-20

Blockchain: Binance Smart Chain

Token Contract: 0x586f4e2a5fc6431ec91646be9d00d7990f50b874

Trading pair: PUSS/BNB

PancakeSwap Pool: 0xd15806ddd25149f828dc667a3bdcff25082aa21

Token Supply

Minting Mechanisms

The token supply of PussyCat is capped at 228,348,334,000,000 **PUSS and there will never be any more minted after reaching this max supply. After that, any PussyCat tokens that get lost or burnt are permanently removed from the money supply, meaning the total supply will decrease, or deflate over time. This is the opposite to central bank backed fiat currencies that can issue new money at any time (there's no limit on how much money they can create) and thus the value of PussyCat will increase while the value of dollars or euros decreases over time.**

Burning Mechanisms

A deflationary Cryptocurrency

Rules encoded using smart contracts in the token mean that 1% of all transactions are automatically burnt by being sent to the Official Binance Smart Chain Burn Address:

Burn BEP-20 Contract: 0x00

Tokens sent to this address can never be recovered as no one has access to its private key; so they are lost and removed from the total supply forever. This means that as each subsequent person buys or sells, supply is removed from the market and this has a positive impact on the price. This burning mechanism is a deflationary force that will push PussyCat value to the moon and beyond!

Static Rewards

It pays to hold PussyCat

Rules coded into the PussyCat token smart contract, automatically take 3% of all fees on the network and redistributes this to holders periodically. Investors can sit back and literally watch their PussyCat balances grow by the hour. The more on-chain activity (buy/sells, etc) the faster your balance will grow. This rewards investors to buy and hold PussyCat tokens as they receive passive income for just *hodling*.

Charity

A meme coin with a social conscience

PussyCat is coded by a 100% all female and non-binary development team. As young activists we are compelled to give back to our community and felt the best way to do this was by supporting women's rights organisations and movements worldwide, especially those that bring to the forefront, new issues faced by women today.

At the same time, women face specific impediments to their activism such as limited access to funding and support. As a community built around feminist activism, PussyCat is encoded to automatically take 1% of all transactions via the magic of smart contracts. This ensures that 1% of all transactions go directly to the public Marketing & Charity wallet. Here is the wallet on BSC scan:

Charity Fund Contract: [0xd272292e0be746c1005badaa5ccc87e54f00987c](#)

These funds are accumulated and set aside for donations to charities, activists, visionaries, policy makers, academics, celebrities and other thoughtful leaders who are working to achieve gender justice and women's human rights worldwide.

Automated Liquidity Pool

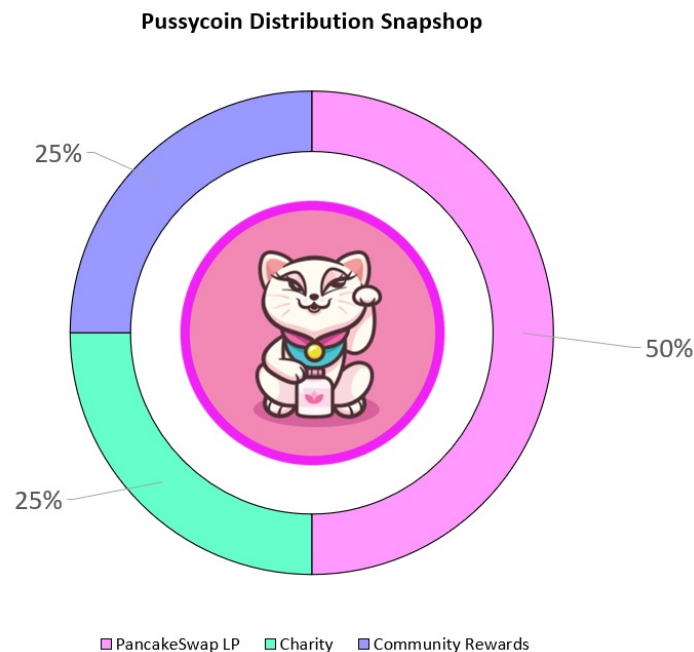

Ample liquidity is provided via smart contract

A problem faced by many new cryptocurrency projects is that there is not enough liquidity to facilitate fair exchange or the liquidity is subject to large decreases and increases, making it unstable. PussyCat automates 3% of all on-chain network fees to go directly to the Liquidity Pool on PancakeSwap to ensure liquidity continues to grow in a stable and sustainable manner.

PussyCat Distribution

Tokens distributed fairly

The initial PussyCat Token Generation Event was executed by The Pussy Doctor Foundation. The distribution created 228,348,334,000,000 **PUSS, which was distributed to the following stakeholders: PancakeSwap Liquidity Pool & Community Rewards Fund**

Fair Token Launch

PussyCat is about creating a community for everyone. We want the world to enjoy the benefits of PussyCat, and the best way to achieve this is through a fair launch on PancakeSwap Dex.

This means:

- ✓ NO Venture Capitalists**
- ✓ NO Token Unlocks**
- ✓ NO Team Tokens**
- ✓ NO Private Sale**
- ✓ NO Initial Coin Offering**
- ✓ NO Pre-Sale**

To create a self-funded and community-owned currency, everyone needs to purchase tokens – including the Pussy Team. In this way, everyone begins from behind the same starting line. To make sure PussyCat is launched 100% fairly, all tokens must be bought via PancakeSwap Liquidity Pool with a nominal starting price of just 0.0000000000621 USD per PUSS.

There will be 182,678,667,200,000 PUSS up for grabs, a substantial 80% of total supply. There will be no Pre-Sale, no Private Sale or Venture Capitalists involved. \ A fair distribution, with EVERYONE having the chance to buy PussyCat.

Security

The Binance Smart Chain (BSC) is a blockchain network that runs in parallel to the Binance Chain. In contrast to the Binance Chain, BSC features smart contract functionality and compatibility with the Ethereum Virtual Machine (EVM). PussyCat is a BEP-20 token on the Binance Smart Chain so the security aspects of validating blocks and transactions are outsourced to the BSC Network of 21 elected validating nodes. The PoSA algorithm built around 21 elected validators prevents individual validators from gaining too much control over the network and going rogue.

The Binance Smart Chain offers our community the added interoperability of facilitating their transactions through Ethereum- based wallets, such as MetaMask. An added advantage of issuing PussyCat on the BSC is that it offers our community an affordable blockchain experience through smaller transaction fees compared to the Ethereum Network.

Binance Smart Chain married decentralisation with low transaction fees and acceptable energy consumption.

PussyCat delivers the first 100% community owned token on the Binance Smart Chain, laying a foundation of trust upon which the world's next great currency will grow.
